

# Green Screen - Chroma Key Studio

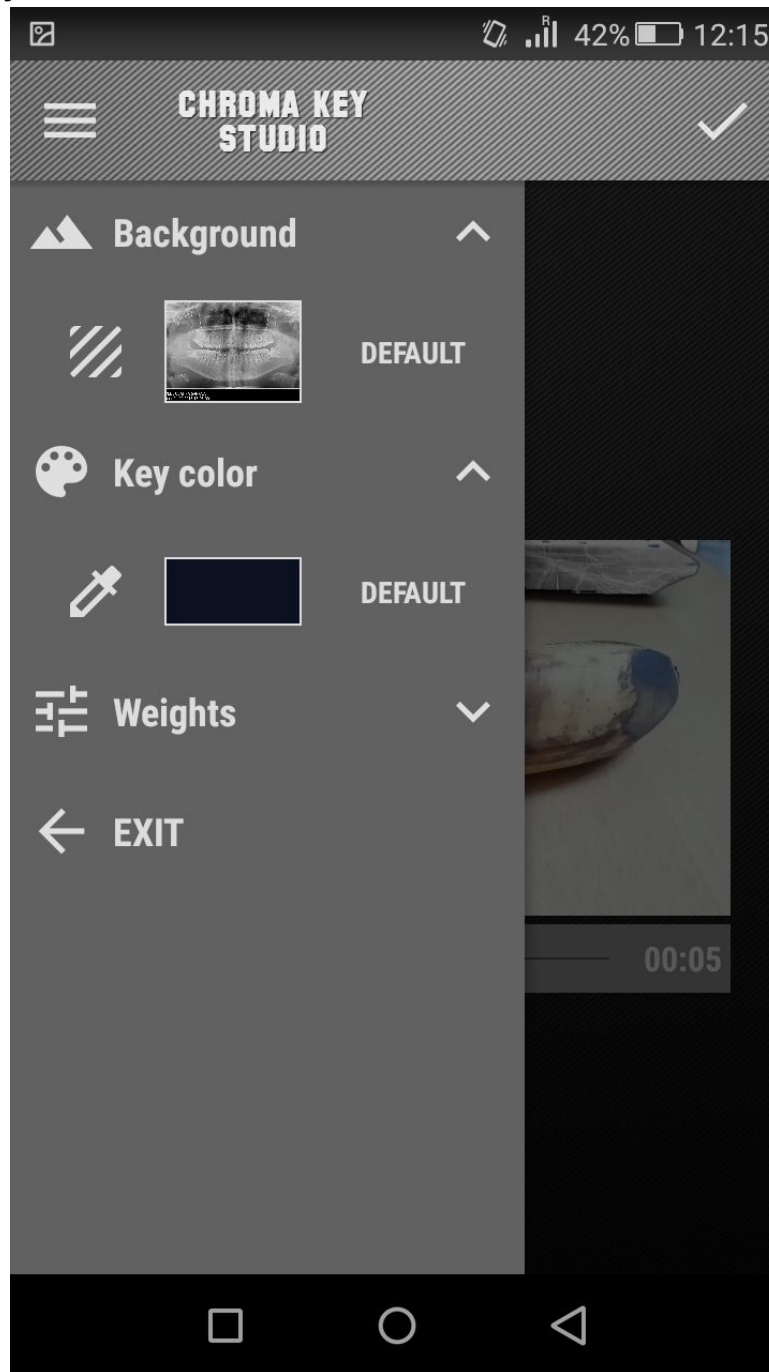

**Chroma Key Studio** is a simple greenscreen app that lets you mix two images or frames together, in which a color from one image is removed (or made transparent), revealing another image behind it.

## Step 1. Load Media

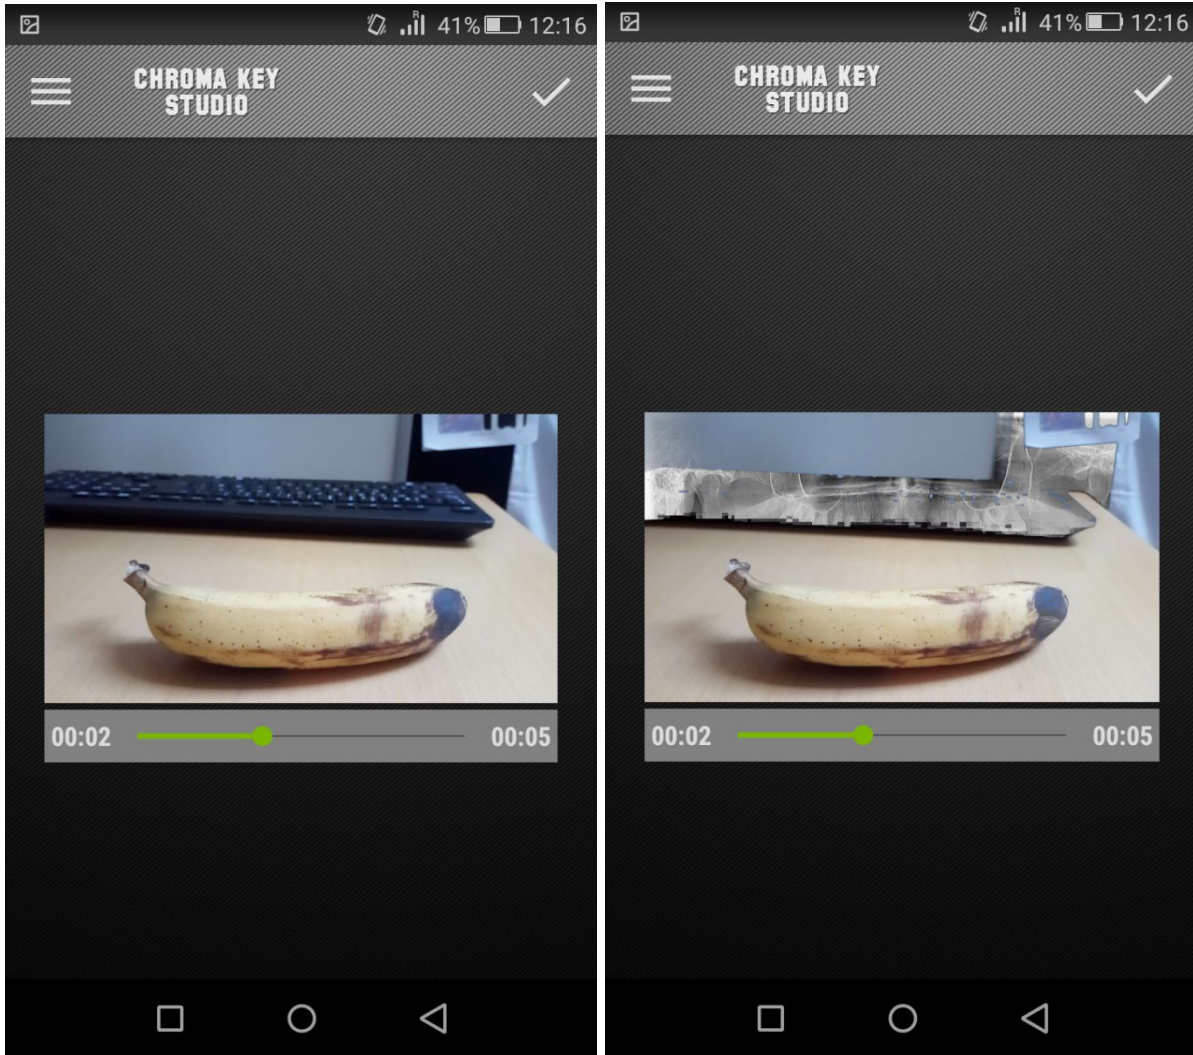

You may choose a photo or video from your gallery or take one through the app.

## Step 2. Select key colour

While the default option is green, you can select any other colour to use for your chroma keying. The app will automatically check your photo/frames for that colour and replace it with the background.

## Step 3. Choose background

You may use a default background or choose one from your gallery. It should already be scaled and edited before you add it to the app, since you can't change it afterwards.

#### **Step 4. Export**

To export your work, simply click on the tick in the top right corner. Chrome Key Studio will save your work in the app files and it should be accessible by going to your Gallery.
